1. Explain Functions of CPU

The **CPU (Central Processing Unit)** is called the **brain of the computer**. It performs all processing tasks and controls the working of the computer.

Functions of CPU:

- Processes data and instructions.
- Performs arithmetic calculations such as addition and subtraction.
- Performs logical operations and comparisons.
- Controls all activities of the computer.
- Manages communication between input and output devices.

Answer:
The CPU is the main part of a computer that processes data, performs calculations, executes instructions, and controls all computer operations.

---

2. Describe Input and Output Devices

Input Devices

Input devices are used to enter data and instructions into a computer.

Examples:

- Keyboard
- Mouse
- Scanner
- Microphone

Output Devices

Output devices display the processed information from the computer.

Examples:

- Monitor

- Printer
- Speaker
- Projector

Answer:
Input devices are used to enter data into a computer, while output devices are used to display the results of processing. Examples of input devices are keyboard and mouse, while monitor and printer are output devices.

---

3. Explain MS Word Features

MS Word is a word processing software used for creating and editing documents.

Features:

- Create and edit documents.
- Format text using different fonts and styles.
- Check spelling and grammar.
- Insert tables, pictures, and charts.
- Save and print documents.
- Create professional reports and letters.

Answer:
MS Word is a word processing application used to create, edit, format, save, and print documents. It provides tools for text formatting, spell checking, and inserting tables and images.

---

4. What is Operating System?

An **Operating System (OS)** is system software that acts as an interface between the user and the computer hardware.

Examples:

- Windows

- Linux
- Android
- macOS

Functions:

- Manages memory.
- Controls devices.
- Runs applications.
- Organizes files and folders.

Answer:
An operating system is system software that controls and manages computer hardware and software resources. It helps users interact with the computer and run applications.

---

5. Explain Types of Memory

Computer memory is used to store data and instructions.

Primary Memory

- Directly accessed by CPU.
- Fast in speed.
- Temporary storage.

Examples: RAM and ROM

Secondary Memory

- Stores data permanently.
- Larger storage capacity.
- Slower than primary memory.

Examples: Hard Disk, SSD, Pen Drive, CD/DVD

Answer:
Computer memory is of two types: Primary Memory and Secondary Memory. Primary memory is fast and directly used by the CPU, while secondary memory stores data permanently.

---

6. Write Uses of Internet

The Internet is a worldwide network that connects computers and users across the world.

Uses:

- Sending and receiving emails.
- Online education and learning.
- Searching information.
- Online shopping.
- Online banking.
- Entertainment and social media.

Answer:
The Internet is used for communication, education, information sharing, banking, shopping, entertainment, and many other online services.

---

7. Explain Types of Networks

A network is a group of connected computers that share resources and information.

LAN (Local Area Network)

Connects computers within a small area such as a home, office, or school.

MAN (Metropolitan Area Network)

Connects computers within a city or town.

WAN (Wide Area Network)

Connects computers over large distances such as countries and continents.

Answer:
The main types of networks are LAN, MAN, and WAN. They differ according to the area they cover.

---

8. Describe MS Excel Features

MS Excel is a spreadsheet application used for storing and analyzing data.

Features:

- Performs calculations using formulas.
- Organizes data in rows and columns.
- Creates charts and graphs.
- Sorts and filters data.
- Generates reports.

Answer:
MS Excel is used for calculations, data management, chart creation, and report generation. It helps users organize and analyze information efficiently.

---

9. Explain PowerPoint Uses

MS PowerPoint is presentation software used to create slide-based presentations.

Uses:

- Educational presentations.
- Business meetings.
- Project reports.
- Training sessions.
- Seminars and workshops.

Answer:
PowerPoint is used to create professional presentations with text, images, charts, animations, and multimedia content.

---

10. What is Antivirus?

Antivirus is software designed to detect, prevent, and remove viruses and other malicious programs.

Examples:

- Windows Defender
- Quick Heal
- Avast
- Norton

Answer:
Antivirus software protects computers from viruses, malware, spyware, and other cyber threats by scanning and removing harmful files.

---

11. Explain Cloud Computing

Cloud Computing refers to storing and accessing data and applications over the internet instead of a local computer.

Examples:

- Google Drive
- OneDrive
- Dropbox

Benefits:

- Access data from anywhere.
- Easy data backup.
- Saves storage space.

Answer:
Cloud computing allows users to store, manage, and access data over the internet, making data available from any device with internet access.

---

12. Write Internet Safety Measures

Safety Measures:

- Use strong passwords.
- Do not share personal information online.
- Install antivirus software.
- Avoid clicking unknown links.
- Update software regularly.
- Use secure websites (HTTPS).

Answer:
Internet safety measures help protect users from cyber threats. Users should use strong passwords, antivirus software, and avoid suspicious websites and links.

---

13. Explain Hardware and Software

Hardware

Hardware refers to the physical components of a computer.

Examples: Monitor, Keyboard, Mouse, CPU

Software

Software is a collection of programs that instruct the computer what to do.

Examples: Windows, MS Word, Excel

Answer:
Hardware consists of the physical parts of a computer, while software consists of programs and applications that run on the hardware.

---

14. Describe Storage Devices

Storage devices are used to store data and information for future use.

Examples:

- Hard Disk
- SSD
- Pen Drive
- Memory Card
- CD/DVD

Importance:

- Stores documents and files.
- Keeps data safe for long periods.

Answer:
Storage devices are hardware components used to store and retrieve data. They provide permanent storage for files and programs.

---

15. Explain Windows OS Features

Features:

- User-friendly graphical interface.
- Multitasking capability.
- File and folder management.
- Hardware support.
- Security and updates.
- Networking support.

Answer:
Windows OS provides an easy-to-use interface, supports multitasking, manages files and devices, and offers security features for users.

---

16. Describe Formatting Tools in Word

Formatting tools help improve the appearance of text.

Tools:

- Font Size
- Font Colour
- Bold
- Italic
- Underline
- Alignment
- Bullets and Numbering

Answer:
Formatting tools in MS Word are used to change the appearance of text and make documents more attractive and readable.

---

17. Explain Table Creation

A table is used to organize information into rows and columns.

Steps:

1. Open MS Word.
2. Click the **Insert** tab.
3. Select **Table**.
4. Choose the required rows and columns.
5. Enter data into the table.

Answer:
Tables are created in MS Word using the Insert tab. They help organize and present data clearly in rows and columns.

---

18. What is File Management?

File management is the process of organizing and controlling files and folders in a computer.

Tasks:

- Creating files and folders.
- Renaming files.
- Copying and moving files.
- Deleting unwanted files.

Answer:
File management helps users organize, store, retrieve, and manage files and folders efficiently on a computer.

---

19. Explain Internet and Its Uses

The Internet is a global network that connects millions of computers worldwide.

Uses:

- Communication
- Education
- Online shopping
- Banking
- Entertainment
- Information sharing

Answer:
The Internet is a worldwide network used for communication, learning, business, banking, shopping, and entertainment.

---

20. Describe Email Working

Email is an electronic method of sending and receiving messages over the internet.

Working:

1. User writes a message.
2. Enters recipient's email address.
3. Clicks Send.
4. Mail server transfers the message.
5. Recipient receives and reads the email.

Answer:
Email allows users to send and receive electronic messages quickly through the internet.

---

21. Explain Cyber Security Threats

Cyber security threats are activities that can damage or steal data from computers and networks.

Examples:

- Virus
- Malware
- Phishing
- Ransomware
- Hacking

Answer:
Cyber security threats are harmful attacks that can steal information, damage systems, or disrupt computer operations.

---

22. What is Backup and Restore?

Backup

Creating a copy of important data and storing it in a safe location.

Restore

Recovering backed-up data when the original data is lost or damaged.

Answer:
Backup is the process of creating copies of data, while restore is the process of recovering that data when needed.

---

23. Describe OS Functions

Functions:

- Process Management
- Memory Management
- File Management
- Device Management
- Security Management
- User Interface

Answer:
An operating system manages computer resources, controls devices, organizes files, provides security, and allows users to interact with the computer.

---

24. Explain File System Concepts

A file system is a method used by an operating system to organize and store files on storage devices.

Functions:

- Creates files and folders.
- Stores data systematically.
- Retrieves files quickly.
- Manages file names and locations.

Answer:
A file system organizes data on storage devices and helps users store, locate, and manage files efficiently.
